CONSTRUCTION

The resistor is constructed on top of a high-grade ceramic body. Internal metal electrodes are added on each end to make the contacts to the thick film resistive element. The composition of the resistive element is a noble metal imbedded into a glass and covered by a second glass to prevent environment influences. The resistor is laser trimmed to the rated resistance value. The resistor is covered with a protective epoxy coat, finally the two external terminations (matte tin on Ni-barrier) are added. See fig.5

FUNCTIONAL DESCRIPTION

Range: -55 °C to +155 °C

Each type rated power at 70 °C:
 RV0603=1/10W; RV0805=1/8W; RV1206=1/4W;
 RV2010=3/4W; RV2512=1W

The DC or AC (rms) continuous working voltage corresponding to the rated power is determined by the following formula:

$$V = \sqrt{(P \times R)}$$

or max. working voltage whichever is less

Where

V = Continuous rated DC or AC (rms) working voltage (V)

P = Rated power (W)

R = Resistance value (Ω)

Maximum working voltage can be applicable to resistors only if the resistance value is equal to or higher than the critical resistance value.
